

Introduction to Dynamic Web Content

LAB # 01

Spring 2024

CSE-403L Database Management Systems Lab

Submitted by: **Ali Asghar**

Registration No.: **21PWCSE2059**

Class Section: **C**

“On my honor, as student of University of Engineering and Technology, I have neither given nor received unauthorized assistance on this academic work.”

Submitted to:

Engr. Sumayyea Salahuddin

Date:

23rd February 2024

Department of Computer Systems Engineering
University of Engineering and Technology, Peshawar

Task 1st

Q1 What four components (at the min.) are needed to create a fully dynamic web page?

Ans: We need the following components for dynamic webpage.

- ① Web server (Like Apache)
- ② A database (Like MySQL)
- ③ Server-Side Scripting language (Like PHP).
- ④ Client-Side scripting language (Like JavaScript).

Q2 What does HTML stands for?

Ans: HyperText Markup language.

Q3 Why does the name MySQL contain the letters SQL?

Ans: Because it is a relational database management system that accept commands in Structured Query language (SQL). SQL is used by users to communicate with MySQL.

Q4 PHP and JavaScript - - - - -

--- why would you use both of them?

Ans: P-T-O

PHP

① PHP runs on the server.

② PHP can easily interact with database

③ used for backend development.

Use:-

PHP is used for server-side processing and database interaction.

JavaScript

① JavaScript runs on the user's browser.

② JavaScript cannot interact easily with database.

③ Mainly used for frontend development.

Use:-

JavaScript is used for client-side interactivity and dynamic content.

Q5 What does CSS stands for?

Ans Cascading Style Sheets.

Q8 List three major new elements introduced in HTML5.

Ans Some major elements introduced in HTML5.

① <article>

② <section>

③ <header>

Q7 If you encounter a bug (which is rare)
----- could get it fixed?

Ans:- For an open-source tool, we can:

- ① Report the bug to community/maintainers
- ② Collaborate with other users (using same tool).

Q8 Evaluate yourself and write a note
about your understanding of this lab.

Ans:- I got good understanding of the
concepts covered in this lab.

I learned about dynamic web
development, HTML, CSS, PHP, MySQL
and JavaScript. I also learned about
Bootstrap and Wordpress. Bootstrap
is a popular front-end framework
while Wordpress is tool for
creating websites.

Task 1.2

Blog:-

The blog site example demonstrates a well-designed blog that includes sections such as the title, header, body and footer. CSS is used to enhance the overall design of the page.

Dashboard:-

In the dashboard example, a line graph and a table are created. CSS is applied to make the design more visually appealing. Additionally, HTML5 features, such as the canvas tag are utilized.

Task 1.3

FRAMEWORK:-

A framework is a structure that we can build software on. It serves as a foundation for building a software.

PHP Frameworks:-

PHP Frameworks play a crucial role in web development. They provide a structured foundation, pre-built components and best practices. They enhance productivity, security and code quality.

Examples:-

- ① Laravel ② Symfony ③ CodeIgniter

Task 1.4

Frameworks and Libraries are pre-coded support programs used to develop complex software applications.

Libraries	Frameworks
① Focus on specific functionalities	① Provide a complete application structure.

- | | |
|---|---|
| ② provide reusable
code components for
tasks like string
manipulation, math operations
etc. | ② Offer a comprehensive
set of tools, conventions and
best practices. |
|---|---|

Task 1.5

PHP MVC Frameworks:

These frameworks provide a structured approach to building web apps. They separate data, presentation and logic.

Examples:

- ① Laravel ② CodeIgniter ③ Symfony

Task 1.6

SQL Database	NoSQL Database
① It is relational	① It is non relational.
② Fixed rows & columns i.e static schema	② Dynamic Schema

③ Structured data

③ Unstructured data

④ Uses SQL for Querying.

④ It has flexible queries.

⑤ MySQL, ORACLE, SQLITE are examples.

⑤ MongoDB, CouchDB, HBase are examples.

Task 1.7

Web Hosting :-

It is an online service that makes your website's content accessible on the internet. When you purchase a hosting plan, you are renting space on physical server to store all the website's files and data.

Websites for web hosting :-

- ① Hostinger → www.hostinger.com
- ② Scala Hosting → www.scalaHosting.com
- ③ Blue host → www.bluehost.com
- ④ InMotion → www.inmotionhosting.com
