

Lab # 09: DBMS LAB Project – Complete Database

OBJECTIVES OF THE LAB

This lab covers third part of DBMS Lab Project Submission that is Physical Schema consisting of SQL Implementation.

- *SQL Database*
 - *Tables*
 - *Metadata*
 - *Primary Keys*
 - *Foreign Keys*
 - *Constraints*
 - *Data*
 - *Queries*
-

COMPLETE SQL DATABASE

Once the Relational/Logical Schema of Project is completed, the next step to implement it in SQL. This requires table creation & its metadata, constraints satisfaction, data population, query execution, etc. All these are part of Physical Schema.

-----Task 9.1-----

Submit the Complete Physical Schema of your DBMS Project. Snapshots of following SQL Commands should be provided along with .sql database file in soft form.

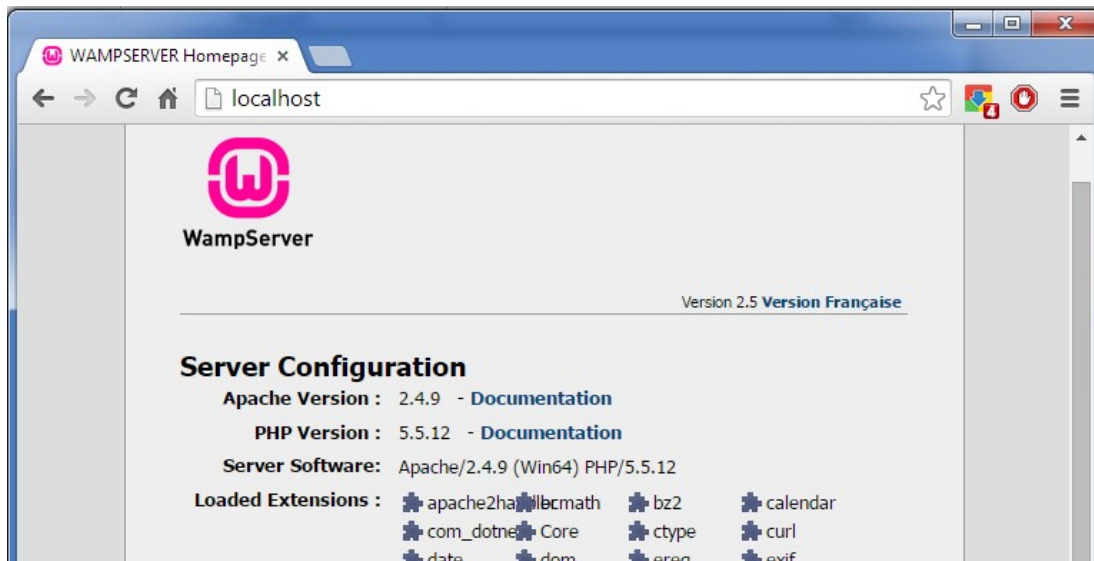

1. **SHOW TABLES**
2. **DESCRIBE** for each table
3. **SHOW CREATE TABLE** for each table
4. **SELECT *** for each table

-----Task 9.2-----

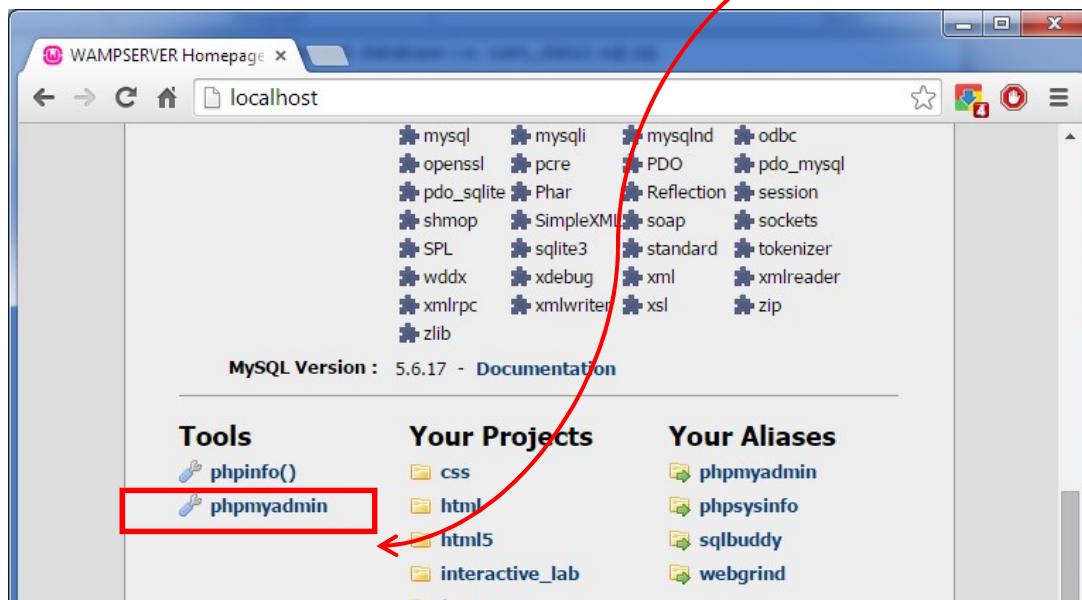

Write some queries for your database along with output snapshots.

(HOW TO) EXPORT YOUR DATABASE FROM MYSQL

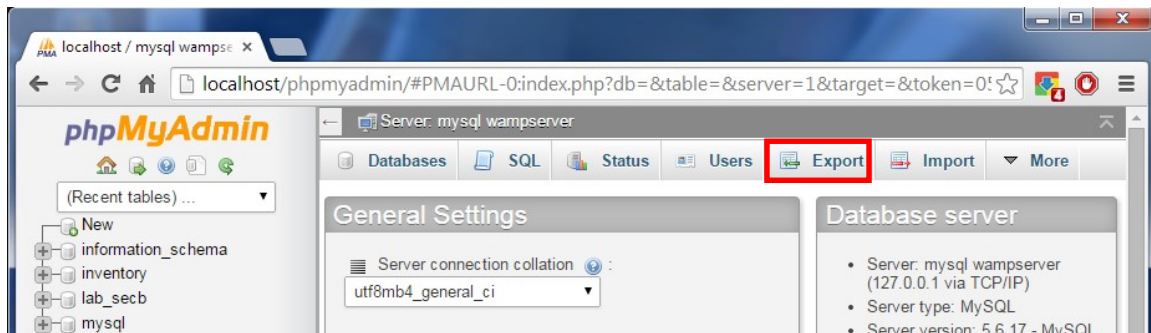

- 1) Start WAMP Server.
- 2) Open browser and type localhost in address bar. Press enter. "WampServer" page is loaded.

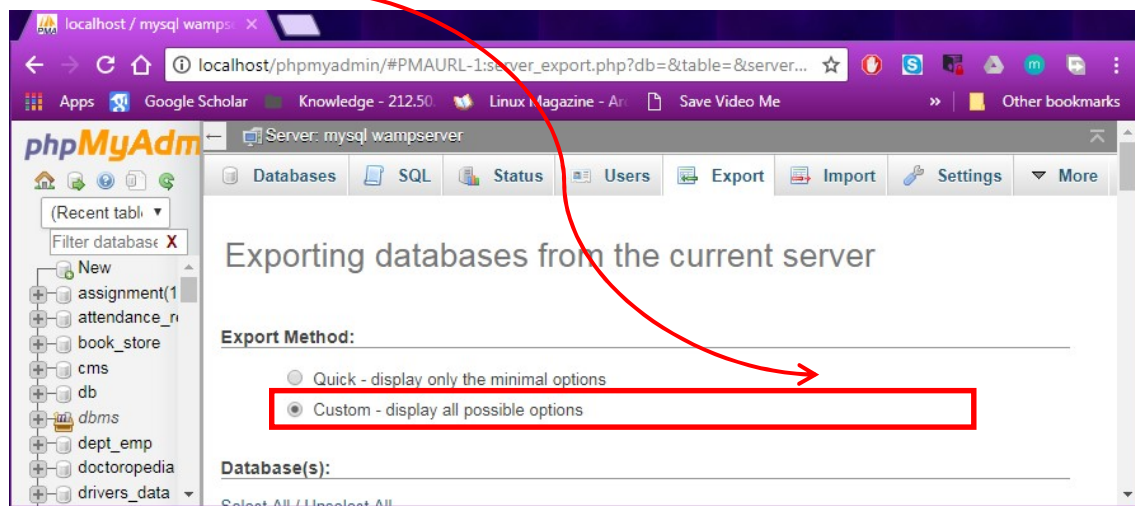

- 3) Scroll on bottom of WampServer page. Select phpmyadmin in Tools menu. "PhpMyAdmin" page is loaded.

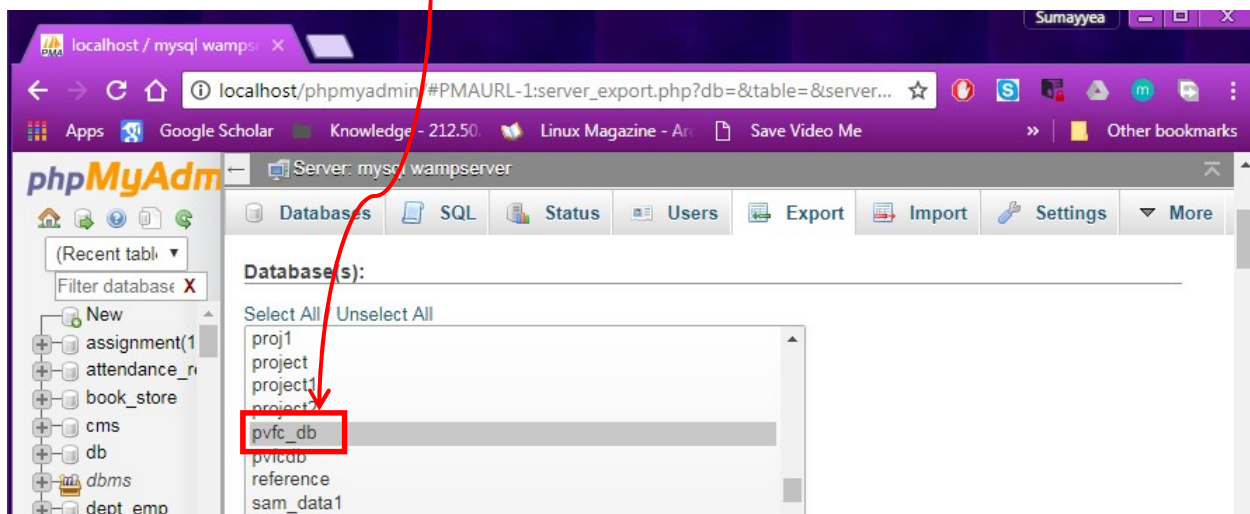

4) Select Export tab shown on right side of PhpMyAdmin page. "Exporting database from the current server" page is loaded.

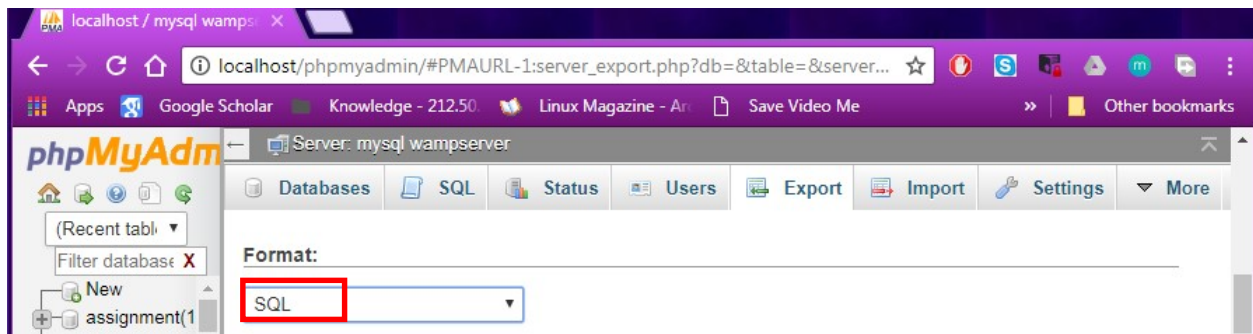

5) Select Custom option in Export Method.

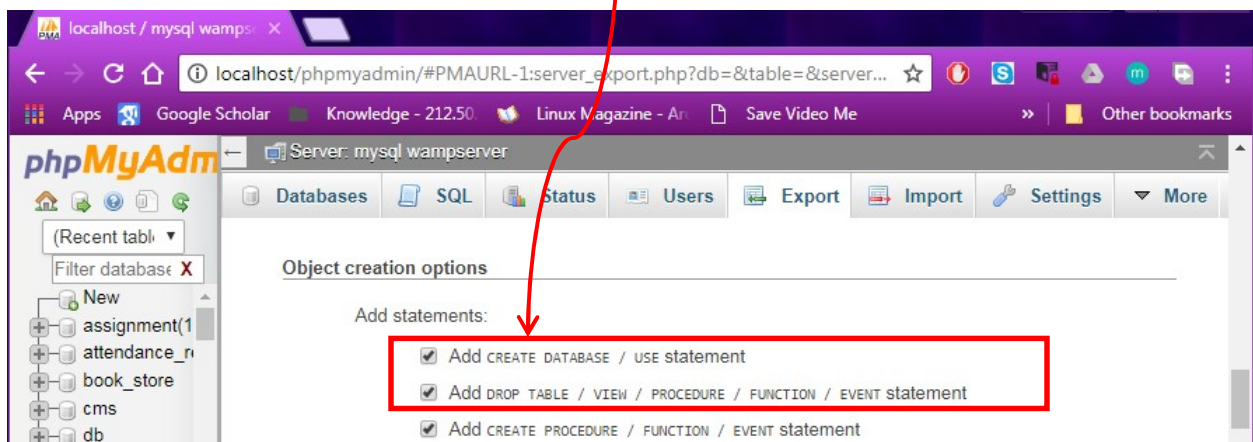

6) Next choose your database.

7) Select SQL as Format.

8) In Format –specific options: check Add create and Add drop radio buttons under Object creation options.

9) Press "Go" button in the end and save database as .sql file.
